DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1 – 3, 5 – 10, 12 and 13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant's amendment claims that the second trench is formed without etching the substrate. There is no disclosure of such limitation in the specification of the present application.

The Applicant discloses on page 14, line 9 to page 15, line 3 that the second trench is formed by etching the insulating film of the dummy gate and the sidewalls with an etchant that has selectivity to the substrate. This shows that up to some extent the substrate would be etched and hence it would contradict with the new limitation of "without etching the substrate." Applicant does not show how the etching of the substrate would be prevented.

Response to Arguments

3. Applicant's arguments with respect to claims 1 – 3, 5 – 10, 12 and 13 have been considered but are moot in view of the new ground(s) of rejection. Applicant's limitation of "without etching the substrate" overcomes the rejection of based on the combination of Yu with AAPA since Yu clearly etches part of the substrate to create the second trench.

Conclusion
